

Amendments to the Claims:

The following Listing of Claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims

45. (Currently amended) A method for applying a protective coating to a substrate, comprising:
- (a) applying a coatable acrylated latex primer composition to the substrate;
 - (b) drying the primer composition to form an acrylated polymer primer coat over the substrate;
 - (c) applying a radiation curable coatable composition to the primer coat before curing the primer coat; and
 - (d) hardening the radiation curable coatable composition by exposing the composition to ultraviolet radiation to form a protective coating over the substrate.
46. (Previously presented) The method of claim 45, wherein the substrate comprises a floor.
47. (Previously presented) The method of claim 46, wherein the floor comprises vinyl tile.
48. (Previously presented) The method of claim 45, wherein the radiation curable coatable composition comprises an isocyanurate monomer.
49. (Previously presented) The method of claim 45, wherein the radiation curable coatable composition comprises a polymerizable monomer selected from the group consisting of an acrylated monomer, an N-vinyl monomer, a vinyl ether, and a styrenic monomer.

50. (Previously presented) The method of claim 49, wherein the polymerizable monomer is an acrylated monomer.

51. (Previously presented) The method of claim 45, wherein the radiation curable coatable composition further comprises a photoinitiator.

52. (Currently amended) A stripper for a cured coating comprising water, benzyl alcohol, n-octylamine, glycolic acid, and a surfactant:

(a) ~~solvent~~;

(b) ~~a coupling agent~~; and

(c) ~~water~~.

53. (Canceled).

54. (Previously presented) The stripper of claim 52, further comprising a dye.

55. (Previously presented) The stripper of claim 52, further comprising a thickening agent.

56. (Previously presented) The stripper of claim 52, further comprising a fragrance.

57. (Canceled)

58. (Canceled)

59. (Previously presented) The stripper of claim 52, wherein the stripper has a neutral pH.

60. (Previously presented) A method of stripping a cured coating on a substrate comprising:

- (a) applying the a stripper composition of claim 52 to the cured coating;
- (b) waiting for a period of time sufficient to loosen the cured coating; and
- (c) removing the cured coating.

61. (Previously presented) The method of claim 60, wherein the cured coating is a cured acrylate coating.

62. (Currently amended) A primer composition comprising an acrylated latex, water, a leveling aid comprising an ammonium salt of a styrene maleic anhydride copolymer, and a surfactant.

63. (Previously presented) The primer of claim 62, wherein the primer has a solids content between about 2 and about 40% by weight.

64. (Previously presented) The primer of claim 63, wherein the primer has a solids content between about 2 and about 20% by weight.

65. (Previously presented) The primer of claim 64, wherein the primer has a solids content between about 4 and about 15% by weight.

66. (Canceled)
